HackHeist 2026

Project summary | GDG on Campus MIET | 11 October 2026

01 Languages, frameworks and libraries

- **Languages:** TypeScript / TSX, semantic HTML via JSX, CSS; JavaScript ESM and JSON configuration.

- **Core:** Next.js 16.4.0 (App Router), React / React DOM 19.3.0, TypeScript 5.9.3; Tailwind CSS 4.3.3 with PostCSS and custom CSS.

- **Visuals:** self-hosted Google Sans Flex (Fontsource), Phosphor React icons, SVG branding and local WebP ribbon artwork optimized by Next.js Image.

02 Architecture, interface and motion

- Prerendered landing page with five sections: hero, about, highlights, event details and join; reusable components and centralized event data.

- Responsive mobile-to-desktop layouts; native anchors, keyboard focus, skip link and essential content available without JavaScript.

- CSS animation, Web Animations API, IntersectionObserver and requestAnimationFrame; pause/resume, reduced-motion support and desktop-only parallax.

03 Security and privacy

- No application backend, database, authentication, forms or personal-data collection; no third-party runtime tracking scripts. React escapes rendered text.

- HTTP headers: X-Content-Type-Options (nosniff), X-Frame-Options (DENY), Referrer-Policy (strict-origin-when-cross-origin), Permissions-Policy (camera, microphone and geolocation disabled). X-Powered-By disabled.

- Git and deployment exclusions protect environment/account files and omit generated artifacts. Latest npm audit: **0 known vulnerabilities**. Review scope: source, dependencies and headers; no penetration-test certification.

04 Tests and quality checks

- **Playwright 1.64.0:** 27 browser tests; local and public production suites passed. Covers content, links, keyboard, no-JavaScript mode, motion controls, security headers and browser errors.

- Responsive checks at 360, 390, 768, 1024, 1366 and 1920px; artwork containment at 360, 390, 430 and 700px; 200% root text sizing.

- **axe-core / Playwright 4.13.0:** zero reported WCAG 2 A/AA and 2.1 AA violations at 390 and 1366px. ESLint and strict TypeScript checks pass; production build previously passed.

05 Development, hosting and remaining inputs

- Node.js 24, npm / lockfile, ESLint 10.12.0, typescript-eslint, React Hooks rules, Prettier 3.9.10; Git / public GitHub repository and Vercel hosting / CLI.

- Superpowers specification, planning and test-first workflow; documented architecture and verification, source review and visual checks. PDF prepared with ReportLab and checked with pypdf / Poppler.

- **Organizer inputs still pending:** final event date and real registration URL. The site clearly displays announcement notices; Register Now links to event details.
